Free Video Player is a very simple to use video player that offers support for an extensive list of file types, such as AVI, MKV, FLV, MP3 and MP4. It does not include complicated options or configuration settings, which means that it can be used by those looking for a straightforward video player, as well as by

inexperienced users. Quick setup and user-friendly GUI Installing Free Video Player takes minimal time and effort. As far as the interface is concerned, the app adopts a normal window with a familiar structure, where a video can be opened with the help of either the file browser or drag-and-drop method. Basic and handy media player options Standard media player controls include

pause and stop, seeking a position in the stream by moving a slider, adjusting the volume level, and switching to full screen mode. In addition, you can create a playlist and add favorites to a library, show visualizations for audio tracks, as well as enable repeat mode for the current or all tracks in the playlist. File associations can be made for any supported format. Evaluation and

conclusion CPU and RAM consumption was low during Free Video Player's runtime. However, it crashed a couple of times when attempting to open video files (with supported formats). On top of that, it does not offer support for hotkeys. We must also take into account that the tool has not been updated for a while. Otherwise, it serves its purpose and can be seamlessly used by anyone. Full

What's New In Free Video Player?

Small size, full power With a rock-solid 15MB installation

size and the aid of some advanced encryption techniques, Ghostery is the ideal tool to keep track of what's tracking you on your Internet surfing. Its freeware status might be just an easter egg, but its power is seriously useful to protect your browsing experience. Secured and discreet A quick and easy install and a clean interface make this a useful tool that only

a few might be aware of, but that won't stop it from protecting you well. The application uses Ghostery's own technology to deactivate objects that could be tracking you, and it doesn't use a common system-wide tool to track you. When an online ad is displayed, Ghostery's status display can be seen in the status bar, showing the number of third party sites that have active scripts, and the

related Web site, with the ability to easily disable them. It also allows you to manually choose which web sites are allowed to track you and which not, among other useful features. View the total amount of data used for each site and keep track of the ones that are using your bandwidth. If that's not enough, you can even view images and videos that are being served on each one of

them. Installing Ghostery won't require you to alter your Internet Explorer settings or any other browser feature. It's not an extension, either. You can access it as the primary browser from your Internet settings, and is also a plug-in for other browsers. Bottom line As a freeware tool, Ghostery isn't all that useful. But as a useful way to protect your Internet browsing, it's a

priceless addition to your toolbox. It's hard to find a better option. Description: Safari has always been one of Apple's most popular products. From the very beginning, it has been a great success and it's still a good piece of software today. Apple was initially reluctant to release its new iPhone software on the iPad for the simple fact that the phone wasn't always paired with it. As a result, the

number of downloads for the first iPad operating system on the web was significantly smaller than it was for the iPhone. The number of downloads for the initial release of iOS 5 for iPad was quite impressive, but that's now changed for good. Apple launched iOS 5 yesterday, a software update that has launched on almost every single one of its devices. As a result,

iPhone and iPad owners have downloaded the update to their tablet devices, as well as the newly released iPod touch. One of the most popular features of Safari on the iPad is the

System Requirements For Free Video Player:

Minimum: OS: Windows 7, 8, 10 (64-bit), or Mac OS X 10.9.5. Processor: 1.8 GHz Intel Core 2 Duo or equivalent. RAM: 2GB Hard Drive: 7.8GB free space Video Card: NVIDIA GTX 970, AMD R9 390 or equivalent Additional Notes: Mac OSX 10.9.5 is not supported. Windows 10 is required to run the game. An

internet connection is required
